

# 5 Reasons to Select Juniper for Your Wired and Wireless Network

JUNIPER  
NETWORKS

Engineering  
Simplicity

## 1 AI-Driven Enterprise

Stay ahead of your competition by using REAL AI to deliver the best performance and security to your end users. Juniper's Mist AI-Driven platform works with both your wired and wireless networks to bring you unprecedented insight and automation.

## 2 Simplified Operations

Get rid of some of those support tickets by managing all your devices as one logical device using Juniper Virtual Chassis and standardized technologies like EVPN. Then take it a step further by using cloud-based orchestration to provide zero-touch deployment and operations with CSO.

## 3 Connected Security

Give the attackers a restless night of sleep. Your infrastructure needs more than just a moat and a drawbridge. Get full-coverage security with Next Gen Firewalls, Advanced Threat Prevention, SecIntel, and more.

## 4 The Future at Your Pace

Virtual Chassis technology allows you to grow your configuration to support up to ten switches and combine different EX Series switches in the same deployment. Have a bigger network? Look to an EVPN-VXLAN architecture without having to redesign the network or perform a forklift upgrade.

## 5 Simple Campus Portfolio

You can enjoy a comprehensive enterprise access point portfolio, a rich set of fixed and modular switches that support any size of campus deployment, WAN edge devices that provide NGFW capabilities, and much more. Juniper has your campus covered.

## A Visionary Position

Juniper Networks (Mist Systems) placed in the 2019 Gartner Magic Quadrant and Critical Capabilities for Wired and Wireless LAN Access Infrastructure. The company was ranked within the three highest scores for all Critical Capabilities use cases. Read the [Magic Quadrant report](#) and [Critical Capabilities report](#).
