Vulnerabilities emerge every day within networks, web applications, databases and IoT devices. They may occur due to software defects or a misconfiguration of information systems. Because they can be exploited, which puts your organization at risk, it is essential to eliminate these exposures, protect your critical IT assets and safeguard sensitive information.

Structured is an award-winning solution provider delivering secure, cloud-connected digital infrastructure and professional services since 1992. Our Governance, Risk and Compliance Consulting Services help organizations protect their infrastructure and assets by methodically discovering vulnerable systems, recommending standards-based remediation influenced by applicable regulatory frameworks, and suggesting or providing tools to manage the entire ecosystem. Threats arise in real-time and are constantly evolving. Structured’s GRC services help position your defenses in this ever-changing landscape.

**Risk Assessments**
Identifying risk in security infrastructure and sensitive information policies is critically important. These assessments unveil the true level of risk, ensuring that policies and procedures align with company and industry standards for security.

**Penetration Testing**
Simulates outside attack, identifies exploitable vulnerabilities.
- Attempt to take control of host and production systems.
- Document steps taken.
- Provide remediation assistance.
- Determine if system configurations meet regulatory compliance mandates.

**Compliance Audits**
Regulatory compliance requirements are often difficult to decipher and even more difficult to apply to a complex infrastructure. Structured’s services will ensure that all systems are properly configured to meet even the most stringent regulations.
Experience, People, Processes and Technologies since 1992

Every organization -- large or small, heavily regulated or independent of governmental oversight -- benefits from a planned and organized security program to align IT assets and data with broader business goals. Acting accountably, breaking through silos, minimizing exposure risk, and safeguarding privacy, data and assets is key for every organization -- and is the essence of governance, risk management and compliance.

Structured’s experienced and highly certified GRC consultants bring a holistic, process-driven, business-minded approach to the policy assessments and security services they conduct. Best of all, they simply are great people who care about making the world a more secure place.

Structured’s GRC services can be narrowly focused on a type of technology or segment of infrastructure. They can also be the beginning of a larger infrastructure redesign project or new enterprise deployment.

Every organization is unique, so our services are customizable for the business need. Most important, our services are delivered with care and respect for the security and well-being of your people, processes and technologies.
